Task : Host a static website in Amazon S3

STEPS FOR TASK

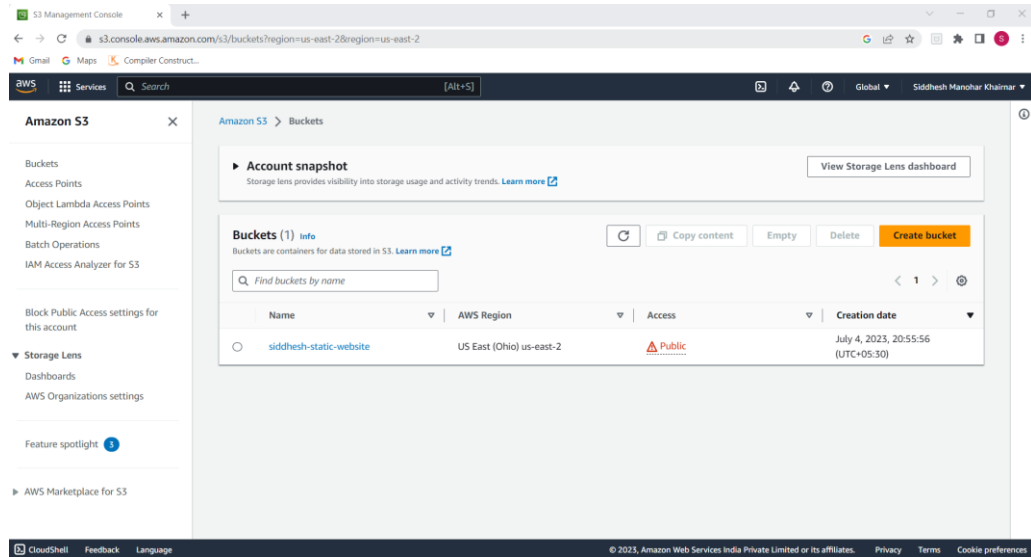

- a) Created account in AWS
- b) Build one static website containing HTML,CSS, JS
- c) Created bucket on Amazon S3
- d) Uploaded files on that bucket
- e) With the help of link , tried on hosting it and their was an error with it
- f) Then fixed that error using bucket policy generator and then given access to all the users in public mode
- g) Successfully hosted the website on Amazon S3

Screenshots of the work I have done

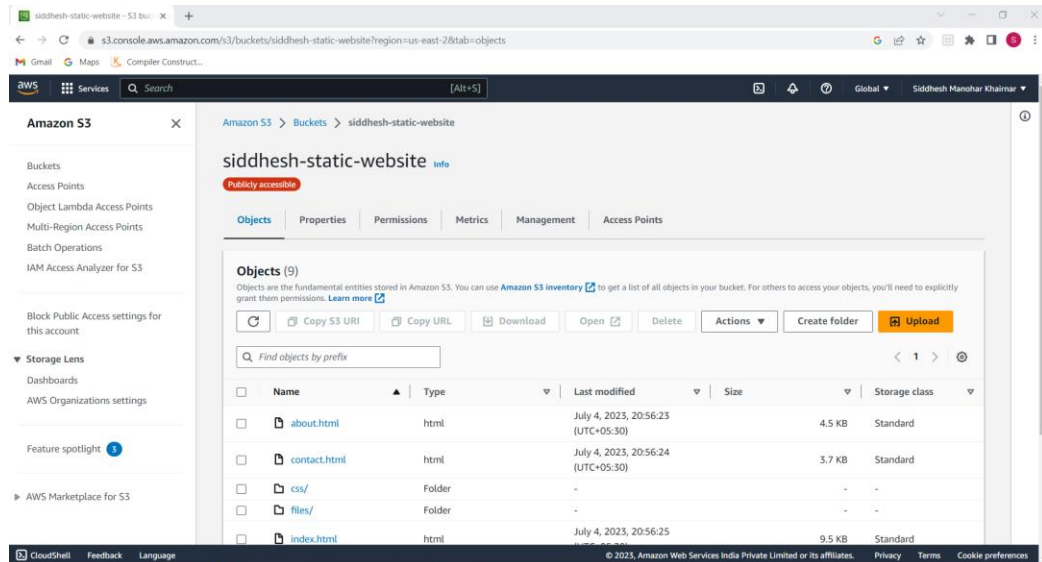

1. Account of AWS

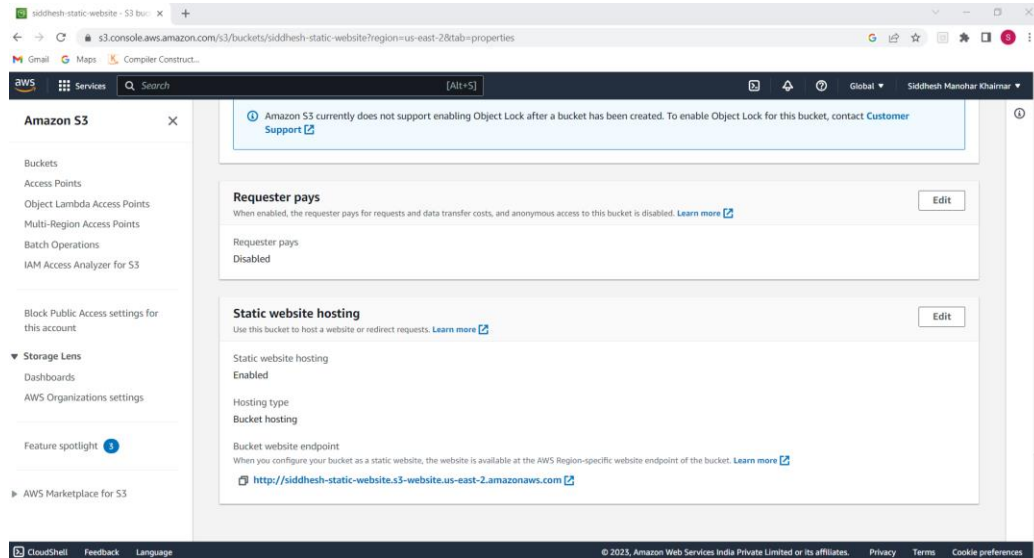

2. Created bucket on Amazon S3

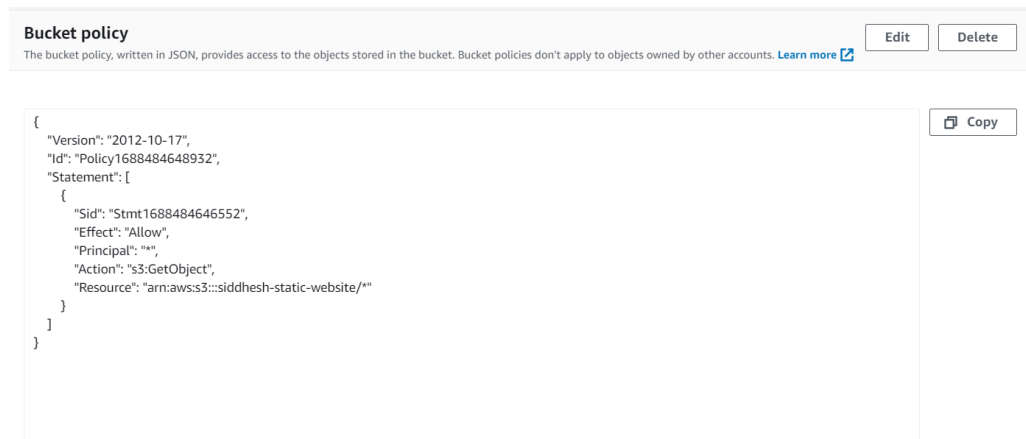

3. Uploaded files on this bucket

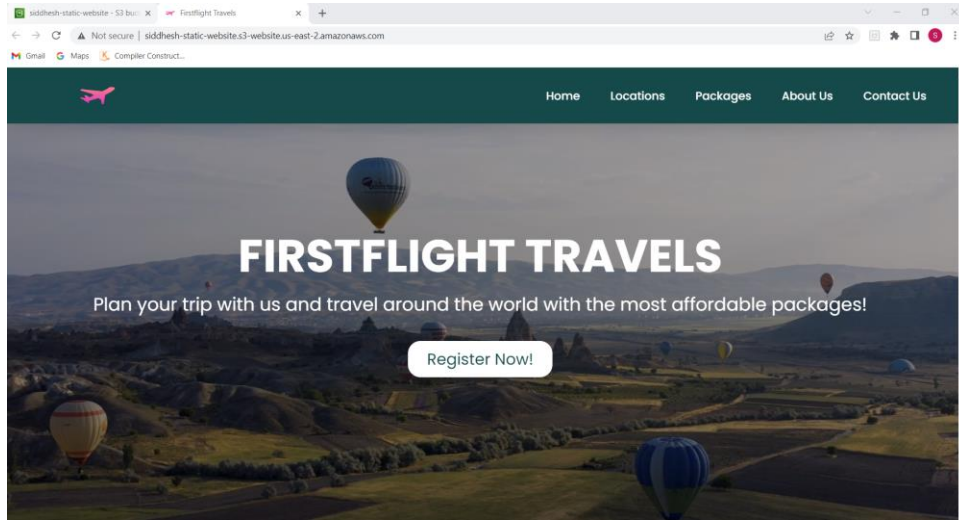

4. Static website link

5. Bucket policy

6. Website hosted on Amazon S3
